TOT'em Enhanced

**Welcome to the future of
the workplace.**

The TOT'em Enhanced family is a flexible storage system for both work tools and personal items, tuned to both office and home environments.

Productivity and satisfaction are directly related to the way workspaces adapt to personal needs. TOT'em Enhanced delivers these qualities in a fun, simple and elegant way.

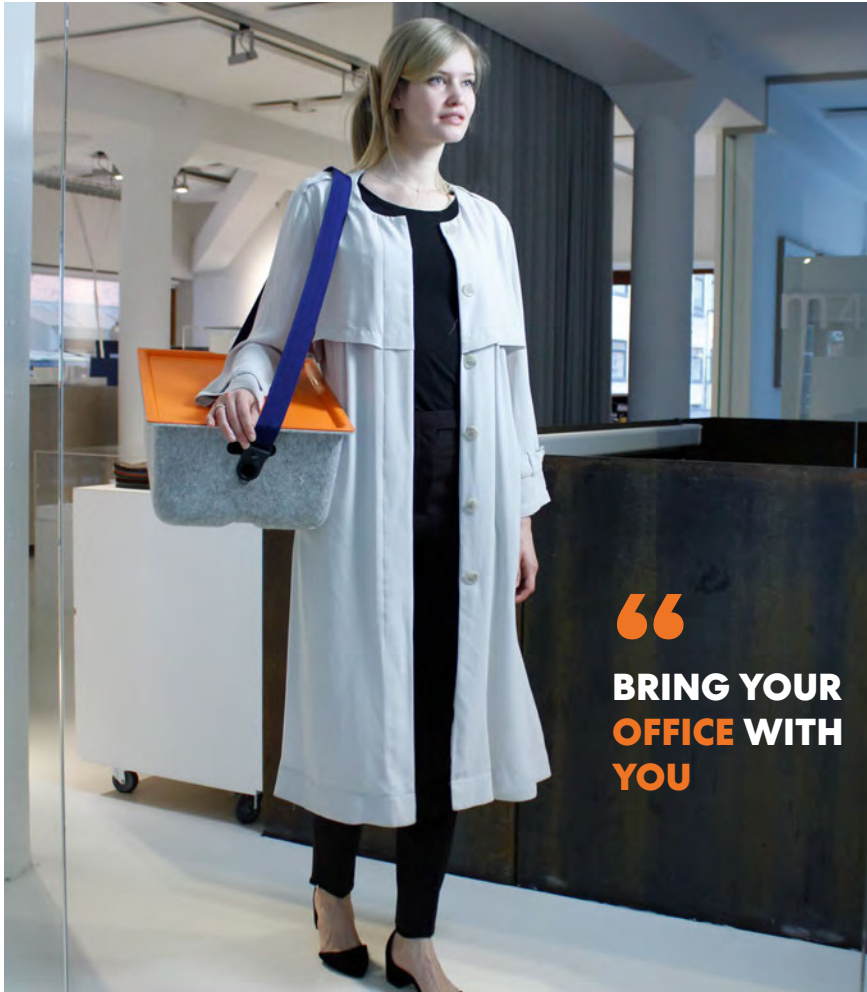

Designed to accommodate the shift to mobile deskings, home-office and remote working scenarios, The system houses interchangeable inserts that allow for quick set-up, storage and relocation of workspaces.

The ensemble of pieces can be customized for a wide variety of purposes, offering a more flexible alternative to rigid and expensive office furniture.

“

**FUN, SIMPLE,
ELEGANT.**

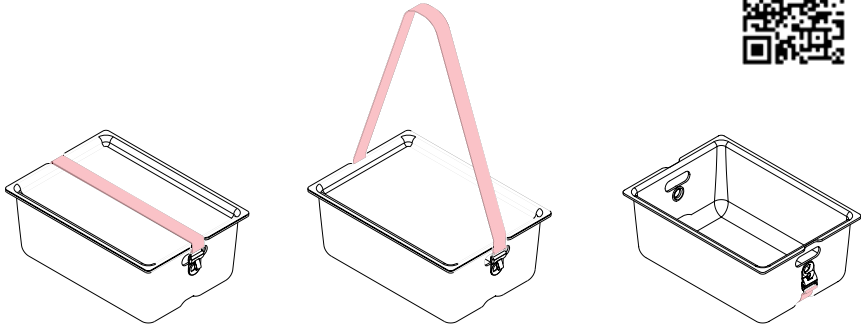

“

**BRING YOUR
OFFICE WITH
YOU**

The TOT'em Enhanced family is based on an integrated tote, lid and strap system that functions as a lock, shoulder-strap and carry handle in one. This permits one or two hands to remain free even when carrying your equipment around the office.

The lid and lock function together as a security mechanism. Otherwise, the strap tucks neatly away underneath the tote while the lid can be used to contain papers or food and drinks as a personalized desktop space.

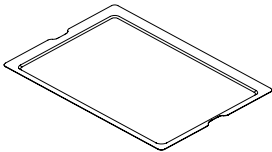

The integrated strap is held closed with a magnetic clasp which can be locked with a standard travel lock to avoid tampering. While closed, the tote trap can be used as a carry handle. (Scan the QR for a video demonstration)

Releasing the clasp creates a shoulder strap for hands-free portability. When not in use, the strap tucks neatly out of the way by simply securing the magnetic fastener while the strap is on the underside.

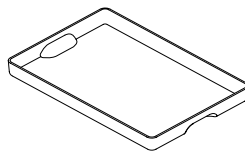

“

SECURE
WHAT
MATTERS

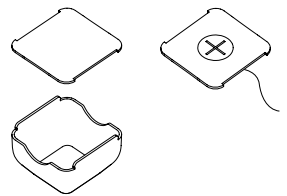

1

A tray acts also as the security lid for the tote. It can be color-customized and is resilient to hot food and beverages.

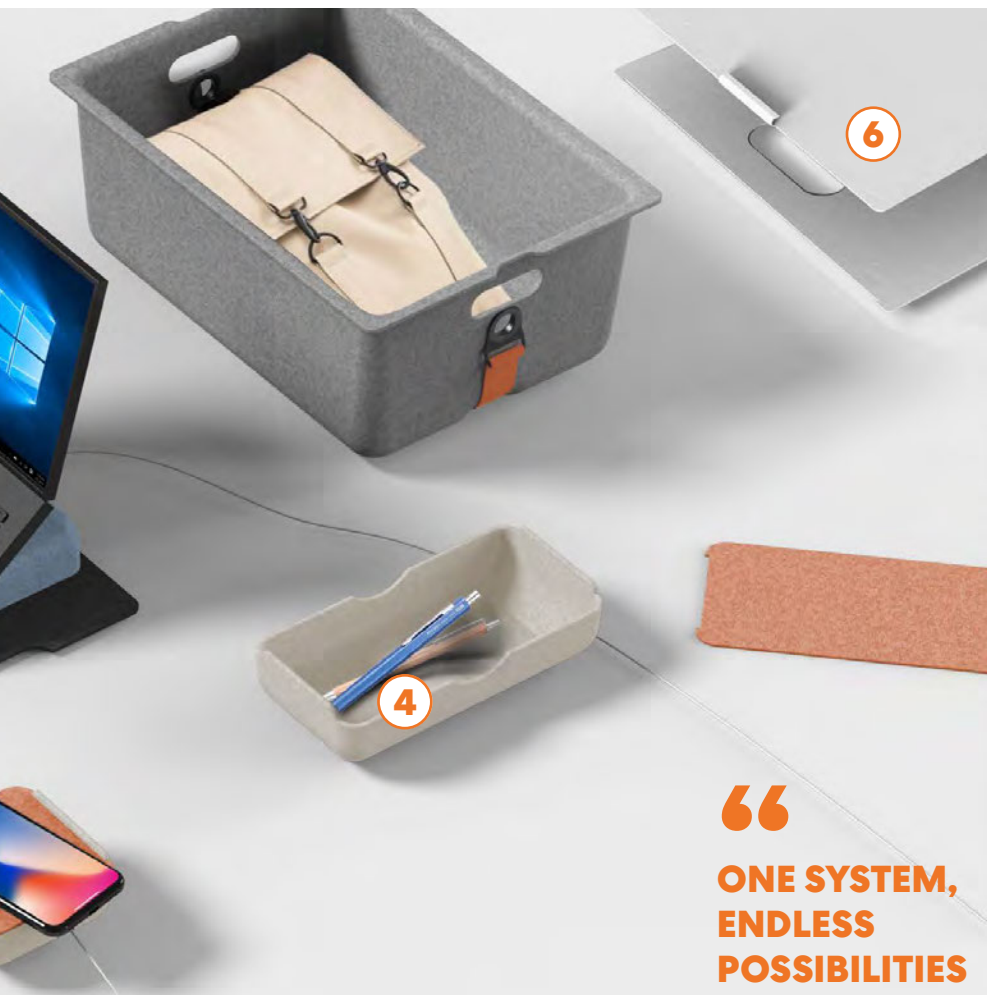

2

The full-size felt insert acts as a shelf within the tote and is a convenient way to transport laptops and papers for meetings.

3

The small insert is ideal for containing chargers and small items. The lid can optionally include an induction charger for smart phones.

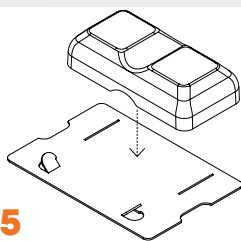

“
**ONE SYSTEM,
ENDLESS
POSSIBILITIES**”

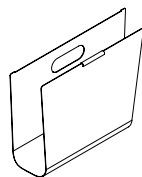

4

The double-length insert is ideal for laptop chargers and stationary. Special details allow cords to avoid the lid when closed.

5

A paper tray / divider supports both A3 and 11x17 format papers. It doubles as a laptop riser by adding a small or double-length insert.

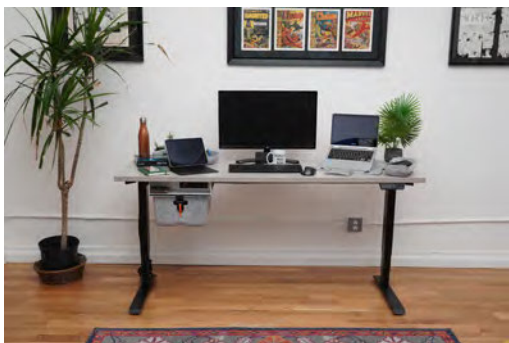

6

2x deep inserts turns the large tote into a vertical file, and matches with the full-size insert to house larger folders.

The TOT'em Enhanced family is designed to be equally suitable at home as in the office. We discovered the importance of keeping the home interior free of office-style products when bedroom became a workspace. The TOT'em Enhanced keeps the harmony in both places.

In the office, special features from the TOT'em Enhanced range allow you to establish your personal space quickly and make the most out of your tools. The tote operates as a drawer at the desk. Features of the inserts include integrated cable management, phone charging and using the laptop as a second-screen,

DIVYDE

**Organize your space in a
better way**

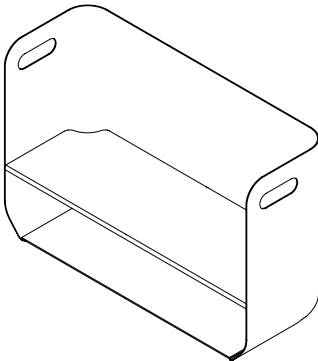

Divyde is a new way of organizing personal space at the desk. It can be used as a separation of space on communal tables, as a power hub and as a portable desk display for your personal items

When moving to other work-stations, the organization of your desk remains in tact, speeding up the transition and avoiding mental disruptions.

Divyde fits inside the standard tote and is matched with TOTem Enhanced inserts so that the parts are flexible and interchangeable with the rest of the system.

The surface is magnetic, allowing the reverse side to act as a noticeboard or picture display with optional magnets supplied.

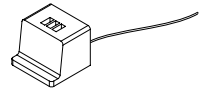

1

Divyde main housing with handles to allow for a quick change of scene

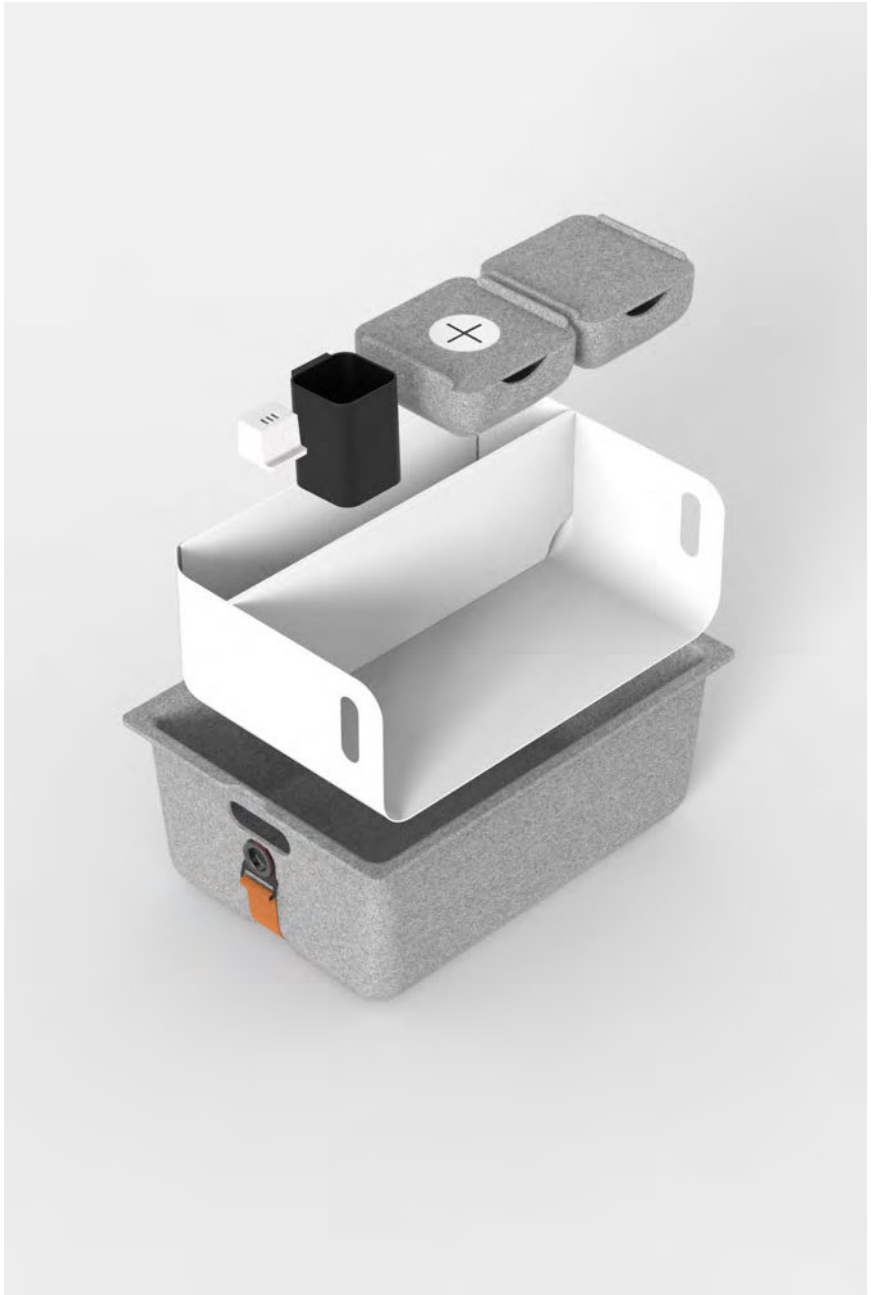

2

Optional pen caddy hooks onto the top rail or handles and can be mounted facing inward, to the side, or outward as a plant holder.

3

Optional charging hub supports USB C, and B outputs and Wireless charging.

Divyde fits into the standard TOT'em Enhanced tote. Shown here with small insert x 2 (one with induction charging lid) pen caddy and USB hub

EVO

Future-proof your workspace with EVO

EVO is a divider, screen and office storage all in one. Designed to evolve with changes in work needs, EVO is a modular and reconfigurable storage system suitable for creating spatial divisions.

The system is adapted to the TOT'em enhanced range, providing lockable sliders that secure the totes in place.

Options include shelving whiteboards and storage cupboards for larger or more permanent items.

EVO can be assembled to create scrum and break-out spaces, create flexible workshop and presentation rooms and team partitions. Storage of totes utilizes their acoustic qualities, dampening reverberation in the room.

When spaces need to be reconfigured, the system can be reassembled using the simple steel grid connections.

SLYDE.

KOMPAKT

**A more flexible solution to
store your Tote!**

KOMPAKT is flexible & sustainable storage system that minimizes wasted storage space when a range of tote sizes are stored interchangeably.

The system is simply made by carving special grooves into high quality, MDF.

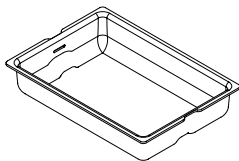

The system is designed for disassembly using stainless steel mechanical fixings and is therefore transported flat-pack, saving carbon, and reconfigurable.

SIZES

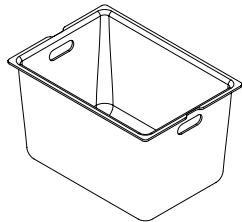

S

The shallow tote is suitable to combine with mall and double-length inserts and lid

M

The standard-size tote furthermore fits Divyde, the full-size insert and paper tray

L

The Large tote also fits the deep inserts which allow it to be used as a vertical file system.

COLORS

The recycled felt used in the tote system comes in a palette of standard colors that create a wide range of combinations that harmonize with each other in sets. The straps colors and powder-coated lid finishes extend this palette offering many options to match brands and colorways.

Custom felt colors and customized printed branding is available at the right order quantities. Contact Slyde for additional details.

OUR STORY

Schmidt Hammer Lassen is a celebrated Danish architecture practice with a long history of refined product and furniture design.

Our focus is on creating long-lasting sustainability. We make sure all decisions, from future-flexibility to material use and design for recycling are all geared to improving our environment.

THE DESIGN

The TOT'em Enhanced family started with a study of the way people relate to their things. A team of participants deconstructed their relationships to objects they used in the workplace, both personal and work related.

By telling stories, demonstrating how things are used and moving them around the workplace we saw how current products fall short of how we want to use them.

The insights gained from this research prompted us to design more flexible, personal, friendly and versatile solutions to the changing workday.
